Professional Summary

Computer Science graduate with hands-on experience in Python full stack development and cloud deployment using AWS. Experienced in building scalable web applications using Flask, MySQL and REST APIs and skilled in applying ML concepts. Passionate about building efficient software solutions while continuously enhancing technical expertise through learning.

Education

B.Tech in Computer Science and Engineering, KL University CGPA: 8.51	2020 – 2024
Intermediate(MPC), Sri Chaitanya Junior College CGPA: 9.63	2018 – 2020
Secondary School Certificate, Siddhartha EM High School CGPA: 8.5	2017 – 2018

Technical Skills

Languages:	Python
Web Technologies:	Flask, REST APIs, HTML, CSS, JavaScript, React
Database:	MySQL, MongoDB
Cloud:	AWS
Machine Learning:	NLP, Deep Learning, Hugging Face
Tools:	Git, GitHub, VS Code

Internship Experience

PYTHON FULL STACK INTERN, Codegnan Destination

- Developed and deployed full-stack web applications using Flask, MySQL, HTML, CSS, and JavaScript.
- Optimized backend and database queries, improving load performance by 25–30%.
- Collaborated in Agile development using GitHub for version control and deployed applications on AWS for scalability.

AWS AI-ML INTERN, AWS Academy

- Trained and deployed machine learning models using AWS services such as S3, EC2 and Lambda.
- Built automated data pipelines that improved data processing efficiency by around 20%.
- Enhanced model monitoring and deployment reliability through cloud-based optimization techniques.

Projects

Quick Notes - Python Full Stack Web Application

github-quicknotes

- Developed a secure, responsive full-stack notes management application with user authentication and CRUD operations.
- Designed RESTful APIs and optimized MySQL queries, reducing response time by 30%.
- Deployed the application on AWS EC2, ensuring scalability and availability.
- **Tech Stack:** Flask, MySQL, HTML, CSS, JavaScript, AWS(EC2). **Tools:** VS Code, Git, GitHub.

Image Captioning - Deep Learning and NLP

github-imagecaption

- Designed a lightweight image captioning system using Hugging Face transformer models.
- Built a Streamlit-based web application for real-time caption generation.
- Improved model performance through optimized preprocessing and inference techniques.
- **Tech Stack:** Python, TensorFlow, Hugging Face. **Tools:** VS Code, Git, GitHub, Render, Streamlit.

Certifications

AWS Cloud Practitioner | Red Hat Enterprise Application Developer | Oracle Cloud Infrastructure Foundations Associate
